New Size New Features

CONCENTRIC VENT KITS - 4"

Features and Details of CONCENTRIC VENT KITS

The concentric design cuts off the incoming fresh air and exhausts smoke. The preferred vertical roof terminal is not easily damaged, reduces the chance of absorbing pollutants, and sees less steam.

New Feature - A 4" vent screen is attached for new 4" Concentric Vent Kit as an accessory. The vent screen is designed to keep birds and leaves from dropping into the exhausting pipe. Comply with UL 1738 standard.

Cut only one hole instead of traditionally cutting two holes through roof or side wall for exhaust and intake pipes to complete installation.

- Do not use the Concentric Vent kit for anything other than a Category IV furnace. Failure to follow this warning could result in fire, personal injury or death.
- Do not operate the furnace until the installation and assembly of the Concentric Vent and all piping are completed. Failure to follow this warning could result in product damage or improper operation, personal injury or death.
- Recirculation of flue gasses may occur, causing the intake pipe to freeze shut during cold weather operation if the venting system is not installed per these guidelines. If the venting system is not installed properly, flue gas may recirculate, possibly causing the intake pipe to freeze shut during cold weather.

Please consult manual to your appliance prior to purchasing this concentric vent kit to ensure that it is compatible with your system.
